# CRITERION NETWORKS

Criterion Networks for Enterprises

Hosted enablement services designed to accelerate the transformation of network infrastructure and services.

Overview

Enterprise big and small are are under increasing pressure to modernize and transform their network infrastructure, and faster than ever. From modernizing WAN infrastructure with SD-WAN, to new security solution for distributed workforces, to multi-cloud solutions with containers, enterprises are rapidly shifting technology strategies to seek greater agility, and improved cost structures.

Enterprise **Network Transformation**

- WAN modernization
- Multi-cloud networking
- Network security
- Workforce networking

Enterprise

While for many enterprises, the goals of transformation are clear, the path to getting there is often not easy, requiring upfront knowledge, time, and of course money. Enterprise must evaluate new technologies and vendors, design and validate new network architectures, deploy new infrastructure, and perform ongoing upgrades and sandboxing exercises. Criterion Networks is here to help. We're a cloud company providing hosted enablement services purpose-built for enterprises to accelerate the transformation of their network infrastructure and services.
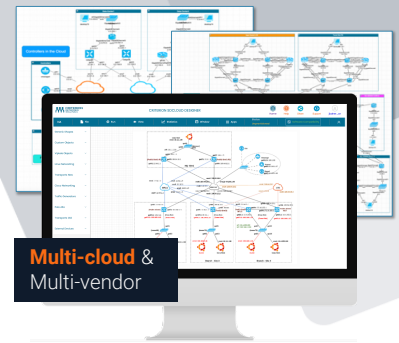

Criterion SDCloud®

At the heart of Criterion Networks is our Criterion SDCloud® SaaS platform providing you with on-demand and custom Learning, Design and Experience environments for network and service transformation. The Criterion SDCloud platform is a multi-user, multi-cloud, multi use-case platform enabling you to design and validate new network architectures, evaluate new products and technologies, and upskill operations teams all faster than ever.

- **DESIGN CENTER**
  to quickly design & validate new networks & services

- **EXPERIENCE CENTER**
  to showcase & sell services more effectively

- **LEARNING CENTER**
  to upskill & reskill teams & staff rapidly

Design Center

Experience Center

Learning Center

Criterion SDCloud®

Criterion SDCloud® Design Center

Criterion SDCloud Design Center provides a drag-and-drop canvas to create and validate new networks at virtually any scale. Connect to cloud resources, production networks, and physical devices to construct real-world scenarios. Apply built-in automation capabilities and API-driven framework for rapid deployment into production.

Multi-cloud &
Multi-vendor

Criterion SDCloud **Design Center**

Criterion SDCloud® Experience Center

Criterion SDCloud Experience Center lets evaluate new products and technologies from SD-WAN to SASE to Edge Cloud to 5G. Perform sandboxing exercises with easy-to-use 1-click environments. Use the built-in collaboration tools to facilitate cross-organization communication and teamwork.

Multi-user &
Multi use-case

Criterion SDCloud **Experience Center**

Criterion SDCloud® Learning Center

Criterion SDCloud Learning Center is your one stop to train technical teams quickly. Our self-paced and guided learning labs are designed to upskill and reskill staff quickly. Create custom learning lab modules and branded offerings using our Design Center and lab -as-a-service capabilities to suit just your needs.

100%
Customizable

Transformer
Partner Program

Partner ecosystem

Our ecosystem of channel and technology partners is growing rapidly. Channel partners use Criterion SDCloud to accelerate go-to-market operations. Technology partners use Criterion SDCloud to better showcase new products and technologies.

Take the next steps with us

The time is now to transform your network, to meet the rapidly changing requirements of the modern enterprise, and to do it all in record. At Criterion Networks, we're all about making this happen for you and your business. Let's take the next steps together.

About

We're a cloud company providing hosted design, experience and learning services to accelerate service provider and enterprise network transformation. Today, our Criterion SDCloud® platform services customers globally transforming networks with leading technologies including SD-WAN, SASE, Container Networking, Edge Computing and 5G.
