CRITERION NETWORKS
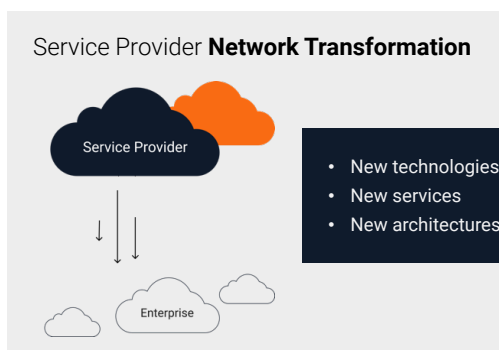

Criterion Networks for Service Providers

Hosted enablement services designed to accelerate the transformation of network infrastructure and services.

Overview

Enterprise customers big and small are demanding more from their service providers…and faster than ever. From new services to modernize wide area connectivity to new security solutions for distributed workforces to multi-cloud solutions, enterprises are rapidly changing their service provider requirements. For enterprises it's an opportunity to achieve greater agility, and in many cases lower cost-structures.

Service Provider **Network Transformation**

Service Provider

- New technologies
- New services
- New architectures

Enterprise

Faced with this, Service Providers are under pressure to respond quickly with new services and capabilities that meet these changing requirements. But new service creation is no easy task, demanding knowledge, time, money, and teamwork to manage through the readiness checklist. Criterion Networks is here to help. We're a cloud company providing hosted enablement services purpose-built for service providers to accelerate the transformation of network infrastructure and services.
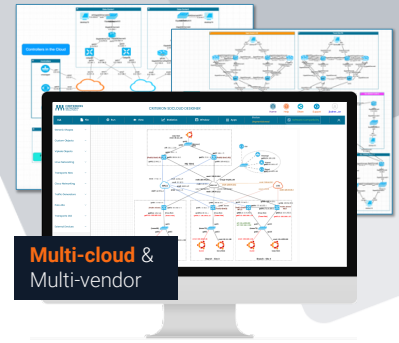

Criterion SDCloud®

At the heart of Criterion Networks is our Criterion SDCloud® SaaS platform providing you with on-demand and custom Learning, Design and Experience environments for network and service transformation. The Criterion SDCloud platform is a multi-user, multi-cloud, multi use-case platform enabling you to design and validate new network architectures, showcase and sell new capabilities, and upskill and reskill sales and operations teams all faster than ever.

- **DESIGN CENTER** to quickly design & validate new networks & services

- **EXPERIENCE CENTER** to showcase & sell services more effectively

- **LEARNING CENTER** to upskill & reskill teams & staff rapidly

Design Center

Experience Center

Learning Center

Criterion SDCloud®

Criterion SDCloud® Design Center

Criterion SDCloud Design Center provides a drag-and-drop canvas to create and validate new networks and services at virtually any scale. Connect to cloud resources, production networks, and physical devices to construct real-world scenarios. Apply built-in automation capabilities and API-driven framework for rapid deployment.
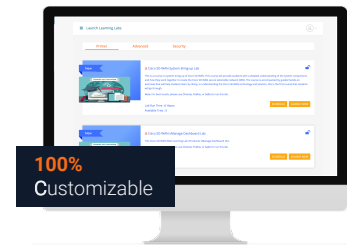

Multi-cloud & Multi-vendor

Criterion SDCloud **Design Center**

Criterion SDCloud® Experience Center

Criterion SDCloud Experience Center lets you showcase new technologies from SD-WAN to SASE to Edge Cloud to 5G. Sell faster and smarter with 1-click sales demo environments. Make it your go-to platform for go-to-market with customizable UI, branding, and built-in collaboration tools.

Multi-user & Multi use-case

Criterion SDCloud **Experience Center**

Criterion SDCloud ® Learning Center

Criterion SDCloud Learning Center is your one stop to train technical teams quickly. Our self-paced and guided learning labs are designed to upskill and reskill staff quickly. Create custom learning lab modules and white-label offerings using our Design Center and lab -as-a-service capabilities to suit just your needs.

100% Customizable

Criterion SDCloud **Learning Center**

Transformer
Partner Program

Partner ecosystem

Our ecosystem of channel and technology partners is growing rapidly. Channel partners use Criterion SDCloud to accelerate go-to-market operations. Technology partners use Criterion SDCloud to better showcase new products and technologies.

Take the next steps with us

The time is now to transform your network and service offerings, to meet the rapidly changing requirements of your customers, and to do it all in record. At Criterion Networks, we're all about making this happen for you and your business. Let's take the next steps together.

About

We're a cloud company providing hosted design, experience and learning services to accelerate service provider and enterprise network transformation. Today, our Criterion SDCloud® platform services customers globally transforming networks with leading technologies including SD-WAN, SASE, Container Networking, Edge Computing and 5G.
